

Figure 1. Stereoscopic images of *Thaumatomyrmex ferox*. Three-dimensional images can be created by using a stereo viewer or by unaided viewing. One recommended method is to hold the figure up, focus on a distant object, lower your eyes to the figure, and refocus on the overlapping middle image. Photographs were taken with a camera mounted on a Nikon dissecting microscope. A. Full face view of Costa Rican specimen, Longino #861-S, head width 0.81mm, Weber's length (from anterodorsal border of pronotum to posteroventral margin of mesosoma, posterior to metapleural gland opening) 1.19mm.
