

Fig. 1:

The concentration of 50 - 70 olfactory Sensilla trichoidea T1 (pT1) in an elliptic patch on each segment of the flagellum of male wasps from the genus *Thynnoides* is a special sub-character. A great number of olfactory Sensilla placodea T1 (pT1) and many tactile hairs (t) cover the surrounding region. x 1400.

Fig. 2:

In the dorsal region of each segment of the flagellum of female wasps from the genus *Thynnoides* we can recognize many olfactory Sensilla basiconica T1 (bT1). Laterally, many olfactory Sensilla placodea T2 and T3 are to be seen. Between them, we can identify some Sensilla coeloconica (c). Tactile hairs are spread over the whole surface of the segments. x 1400.
