**Description of worker:** Small species. Mandible carinulate-striate, masticatory margin armed with four teeth. Clypeus laterally rugulose, interspaces shiny and glabrous, occasionally with faint microsculpture; anterior clypeal margin produced into an apron consisting of only few to several stout apically rounded denticles (Fig. 8). Frontal triangle unsculptured and shiny, partly with faint microsculpture. Dorsal part of head above antennal scrobes less trapezoid than in following species, lateral frontal margins evenly narrowing anteriorly from occipital corners towards clypeus, slightly sinuate, anteriorly slightly diverging; ventral part of head below antennal scrobes wider than dorsal part,
