

dorsally in *M. puryi*; different shape and length of propodeal spines: spines in *M. curvispina* long and arcuated, shorter and almost straight in *M. puryi*.

In gynes the differing shape of the pro-mesonotal suture, the anterior clypeal margin (as in workers) and the petiolar structure (as in workers) are reliable means for separation.

#### Acknowledgements

My sincere thanks are due to all curators and other persons concerned with the loan of specimens. These are (in alphabetic order) B. Bolton, M. Brancucci, D. Burckhardt, C. Burwell, T. Houston, P. Lillywhite, A. McArthur, C. McPhee, B. Merz, T.R. Schultz, K. Walker. I thank Steven S. Shattuck, who made possible a stay at the Australian National Insect Collection (ANIC), Canberra, in Dec. 2002. Prof. A. Buschinger (Darmstadt, Germany) donated valuable material to the NHMW. Karin Poppenberger (Technical University, Vienna) prepared the SEM-photographs. I thank Archie McArthur (South Australian Museum, Adelaide), Philip S. Ward (University of California, Davis) and Herbert Zettel (Naturhistorisches Museum, Vienna) for valuable comments on the manuscript. This study was partly supported by the Ministry of Education, Science & Culture (GZ 4.635/1-IV/1/2002).
