

Sanda, Hyogo, Japan.

Etymology. The specific epithet is the Japanese noun kamiteta, which is the name of a god of sun appearing in an ancient mythology in the Ryukyus.

Distribution. The Ryukyus (Okinawa-jima I.).

Remarks. This species similar to *D. sauteri* FOREL, but a little larger, antenna 9-segmented, eye large and prominently protruding, mesosoma shorter and higher than in *sauteri*, punctures on gastral tergites deeper and more distinct, and spaces between punctures wider.

Acknowledgements

We thank Dr. Sk. YAMANE (Kagoshima Univ.) for giving useful information about types of *D. sauteri* FOREL preserving in the Museum d'Histoire naturelle, Genève. Thanks are also due to Messrs. S. KUBOTA (Tokyo) and H. TAKAMINE (Okinawa Pref.) for helping field works at Okinawa-jima and providing us with valuable material.
