

Figs. 20 - 23: Details of structure of *Myrmica angulata* (holotype, worker; 20, 21) and *M. yamanei* (holotype, worker; 22, 23). (20, 22) head, dorsal view; (21, 23) alitrunk and waist in profile.

For the differences between *M. yamanei* and *M. schoedli* sp.n. see above. It clearly differs from *M. draco* in its well-developed, coarse reticulation on the head dorsum and the punctated surfaces between the rugae of the alitrunk.

Bionomics. Nothing is known about this species except that it lives in forests at altitudes between 1680 and 2200 m a.s.l.

Distribution. Known only from northern Vietnam.

***Myrmica angulata* RADCHENKO, ZHOU & ELMES, 2001**

Myrmica angulata: RADCHENKO & al. (2001: 213): workers.

Material examined: holotype (worker), southern China, Guangxi, Xing An, 500 m a.s.l., 7.VII.1994, No. 2, leg. S. Zhou (BMNH); paratypes: 4 workers from the same nest; NE Guangxi, Hua Ping, 840 m a.s.l., 16.VIII.1998, HP-25, leg. J. Fellowes, 1 worker; Guangxi, Da Yao
