

*Pseudomyrma triplarina* (Weddell)

Weddell, 1849, Ann. Sc. Nat. Bot. (3) 13: 40-113,  
249-268 (*Myrmica*).

*P. arboris-sanctæ* Emery, 1894, Bull. Soc. Ent. Ital.,  
26: 147.

*P. arboris-sanctæ* var. *ecuadoriana* E. Enzmann, 1945,  
pp. 79-80 (MCZ 26809)

The types of *ecuadoriana* are few, partially fragmented, and accompanied by what appear to be *Azteca* workers glued to the card with the *ecuadoriana*. I can see no characters which distinguish them (*ecuadoriana*) from a series of *triparina* workers from several South American localities in the Wheeler Collection.

Following the publication of Dr. Enzmann's paper on *Pseudomyrma*, others were published by his daughter, Miss Jane Enzmann. All but one of the species described, however, appear to be synonyms of common Nearctic forms. Dr. William S. Creighton has discussed these forms with me, and I am grateful for his opinions on several obscure cases. His forthcoming book, which amounts to a revision of North American ants, will also carry notes on the synonymy of these forms, but technical difficulties prevent him from dealing with them at any length. Most species treated below involve Enzmannian names, but several other forms of older authors are changed in status as well.

*Myrmecina americana* Emery

*M. latreillei* subsp. *americana* Emery, 1895, Zool. Jahrb.  
Syst., 8: 271.

*M. latreillei* subsp. *americana* var. *brevispinosa* Emery,  
idem., p. 271.

*M. graminicola* subsp. *quadriscina* J. Enzmann, 1946,  
Jour. N. Y. Ent. Soc., 54: 13-15, figs. 1, 2, worker.

In the manuscript of his work on North American ants, which he has kindly allowed me to examine, Dr. Creighton has raised the form known for many years as *Myrmecina graminicola* subsp. *americana* to the rank of species.
