On the Cranial Characters of the Snake-Rat, new to the British Fauna. By S. JAMES A. SALTER, M.B., F.L.S., F.G.S.

[Read April 7th, 1859.]

THE Society will doubtless recollect that last year* I exhibited at one of our meetings two living rats, one of which I believed to be new to the British Fauna—at least, new so far as that till then it had been unrecognized and undescribed as distinct. The other was a specimen of the old English Black Rat (*Mus rattus*); and this was shown, not on its own account, but for contrast and comparison. And I selected the Black Rat for this comparison because it so much more closely resembles the new one than does the
