

Figueroa Mt., Santa Barbara County; 11-4-45; C. H. Muller; from an oak gall.

From these data it can be seen that the new ant is commonly found on the canyon live oak, *Quercus chrysolepis* Liebm., which is distributed along the California Coast Range and the western slopes of the Sierra Nevada. This oak however, is not confined to California, but occurs in southwestern Oregon, northern Mexico and Baja California, southwestern Utah and New Mexico, southeastern Nevada, and much of Arizona. At Los Gatos the species has been collected from twig galls made on the canyon live oak by cynipid wasps belonging to the following species: *Heteroecus pacificus* (Ashm.), *H. sanctæ-clarae* (Fullaway) and *Disholcaspis truckeensis* (Ashm.).
