

Figs. 1-3. *Cardiocondyla wroughtoni* (Forel). 1. ♀, 2. ♂, 3. Wingless ♂.

A winged male of *Cardiocondyla* was first mentioned by Emery (1869). In a footnote to the description of the worker of *C. elegans* he described a male which he thought might belong to the same species. André (1882) examined the same male and came to the conclusion that it was not a *Cardiocondyla*. The first description of a male of *Cardiocondyla* was the winged male of *C. emeryi* Forel, described by André (1881).
