

*Genitalia*.—Stipes broad and pointed, swelling above the tip on the upper side into a broad tooth. The apex is curved inwards. Volsella and lacinia short, not reaching so far as the angle of the stipes, consisting of three parts, the inner flat and broad, narrowing abruptly at the apical third into a slender elongate point, ventral; the broad portion is terminated above by a blunt angle. The median part is longer and spatulate at the apex, dividing halfway down to form the outer part, which is simple and rounded at apex. Sagittæ long, twisted half over near the apex and curving outwards, enclosing the volsellæ and nearly touching the stipites. They have a series of small back-pointed teeth round the apex and inner border. Sensoria on the stipites and outer double part of volsellæ.

Clypeus shining, with a few irregular punctures. Head shining; there are a few wrinkles between the ocelli. Pronotum encircled with fine striæ. Anterior portion of mesonotum smooth with irregular elongate punctures, the remainder irregularly longitudinally rugose with elongate punctures. Mayrian furrows transversely ridged; sulcus of mesonotum longitudinally ridged. Scutellum evenly striate longitudinally. Epinotum shining with irregular punctures. The rest shining.

♀ (not described). Length 8 mm.

Apterous, ergatoid. Larger than the ♂. Colour similar, but the entire scape ferruginous and the legs more uniformly ferruginous.

There is a small but distinct anterior ocellus, and two microscopical depressions representing the others. The node is shorter and more rounded anteriorly in profile than in the ♂. Gaster very large, as long as the head and thorax together, and swollen.

Striation of thorax more regular, otherwise like the ♂.

1 ♀. Tamiai, July 1915. (5468). Type, W. C. C. coll.

*Leptogenys (Lobopelta) iridescens*, Sm. ♂, Sungai Kumbang.

*Odontomachus latidens*, Mayr. ♂, Suban Ajam.

*Odontomachus hæmatoda*, Ltr. ♂ ♀, Sumatra (Padang).

*Odontomachus rixosus*, Sm. ♂, Aur; Rimbo Pengadang.

♀ (not described). Deälate. Length (without mandibles) 12 mm.; mandibles 2 mm.; head 3·4 mm.; width of head at eyes 2·4 mm.
