

woven) between two or more adjoining leaves. The ants, when disturbed, quiver their bodies up and down.

*Polyrhachis (Cyrtomyrma) rastellata*, Ltr. ♀ ♀ ♂, Sangai Kimbang, 1600 metres, etc.

*Polyrhachis rastellata*, var. *javana*, Vieh.

♀. Length 6 mm.

A single ♀ appears to be this variety, as the legs are red and the tarsi black, as given by Viehmeyer as the colour of his var. *javana* (♀). He gives no description of the ♀.

Fort de Kock, Sumatra (*Jacobson*, 1177).
