

Figure 1. Distribution of *Terataner* in Madagascar. (*T. alluaudi* = 1; *T. foreli* = 2; *T. sp. a* = 3; *T. sp. b* = 4; *T. sp. c* = 5; *T. sp. d* = 6)

ground. Different species of *Terataner* were often found nesting within a meter of one another in the same habitat. *T. alluaudi*, a widespread species, was found sympatrically with *T. foreli* and the more restricted species *T. sp. a*, *T. sp. b*, *T. sp. c*, and *T. sp. d*. Larvae, pupae and adults were packed together into a central cavity.
