

recorded by either Wheeler nor Mayr and this would have helped clarify placement of these specimens within this tribe.

MATERIAL EXAMINED.

None. Neither type specimen nor Wheeler's specimen could be located in spite of numerous queries of most European museums (those listed among museums earlier).

ACKNOWLEDGMENTS

A work of this nature involves interactions with numerous individuals. The support and encouragement of my wife, Jeri, and son Benjamin, have been invaluable. Without their encouragement, this work would never have been published. Museum personnel (previously listed) generously provided specimens and patiently awaited the return of said specimens. I am most appreciative of these individuals finding time in their busy schedules to send me specimens. Barry Bolton (BMNH) provided the needed introductory framework and kept up his encouragement throughout. Several SEM photographs were taken by other individuals. Bob Taylor (ANIC) provided the SEM photographs of *S. orientale*. Glenn and Maxine Ping provided wonderful hospitality during my attempts at collecting additional specimens of *S. orientale* in Brunei. C. Collingwood (CCPC) provided the SEM photographs of the 2,000 year old sub-fossils of *S. debile*. Liz Smith (University of Kansas Lawrence) reviewed an early draft of the keys and offered improvements. Wallace E. LaBerge and Chris H. Dietrich (Illinois Natural History Survey, Champaign) reviewed the manuscript and suggested improvements. John LaPolla (Fairless Hills, Pennsylvania) reviewed a subsequent draft and offered additional improvements. Where possible, I have tried to incorporate all suggestions. I accept responsibility for any remaining errors or omissions.
