

Figure 6. Single most parsimonious cladogram from recoded and expanded matrix (Table 1) with character changes mapped using Farris optimization (ACCTRAN). L=116, C.I.=46, R.I.=61. Black rectangles: non-homoplasious acquisitions of a state; white rectangles: homoplasious acquisitions of states. Numbers above rectangles are character numbers. Numbers at nodes are Bremer values. Taxon names in bold refer to genera currently placed outside Ponertinae.
